

Anthony Cordial

Software Engineer | Metro Manila, Philippines | anthonymcordial2124@gmail.com | +63 9811999466

SUMMARY

Software engineer with 4+ years of experience (since 2022) building and scaling payment and merchant platforms used by thousands of Philippine businesses. Ships end-to-end features in TypeScript, React, Node.js and Go on AWS, with a track record of cutting latency, raising reliability and mentoring newer engineers.

EXPERIENCE

Software Engineer II, PayMongo — Metro Manila, Philippines *Apr 2024 – Present*

- Cut p95 checkout API latency from 820 ms to 310 ms (62%) by caching merchant configuration in Redis and rewriting N+1 PostgreSQL queries, lifting checkout completion by 4%.
- Raised webhook delivery success from 97.1% to 99.95% across 2M+ monthly events by building a Go retry service with exponential backoff, SQS dead-letter queues and a merchant-facing replay tool.
- Led a squad of 4 engineers to ship QR Ph payment acceptance in 10 weeks, processing 500K+ transactions in its first quarter.
- Reduced on-call pages by 45% by introducing SLO-based alerting in Datadog and writing runbooks for 12 core services.
- Mentored 3 junior engineers through code review and weekly pairing; 2 were promoted within 12 months.

Software Engineer I, PayMongo — Metro Manila, Philippines *Jun 2022 – Mar 2024*

- Built the merchant dashboard's payouts and reports module in React and TypeScript, used by 8,000+ merchants, cutting payout-related support tickets by 30%.
- Shortened CI runs from 25 to 9 minutes by parallelizing Jest suites and caching Docker layers in GitHub Actions, saving about 40 engineer-hours a week.
- Raised backend test coverage from 48% to 82% by adding integration tests against containerized PostgreSQL, catching 15+ regressions before release over two quarters.
- Replaced a 3-hour manual settlement reconciliation with an automated Node.js job that flags mismatches within 15 minutes of each daily cutoff.

PROJECTS

Jeepney Route Finder | Next.js, TypeScript, PostgreSQL + PostGIS, Mapbox

- Built an open-source trip planner for 300+ Metro Manila jeepney and bus routes that returns transfers in under 200 ms using PostGIS spatial indexes; reached 3,000+ monthly users and 400+ GitHub stars.

Peso Tracker | React Native, Expo, Supabase *Google Play*

- Shipped an offline-first budgeting app with background sync and GCash/Maya CSV import; 1,200+ installs with a 4.7-star rating.
- Kept the app on the free hosting tier by moving report generation to on-device SQLite, cutting database reads by 70%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Python, SQL

Frameworks: React, Next.js, Node.js (Express, NestJS), React Native

Data: PostgreSQL, Redis, PostGIS, Amazon SQS, Kafka

Cloud & DevOps: AWS (ECS, Lambda, RDS, S3), Docker, Terraform, GitHub Actions, Datadog

Practices: REST and gRPC API design, system design, automated testing (Jest, Go test), code review, on-call

EDUCATION & CERTIFICATIONS

B.S. Information Technology, Aurora State College of Technology — Philippines

2022

AWS Certified Developer – Associate

2024
